## Exponential Functions

**Determine whether each table or rule represents a linear or an exponential function. Explain.**

1.	<table border="1" style="border-collapse: collapse; text-align: center;"><tr><td style="padding: 2px 5px;"><i>x</i></td><td style="padding: 2px 5px;">1</td><td style="padding: 2px 5px;">2</td><td style="padding: 2px 5px;">3</td><td style="padding: 2px 5px;">4</td></tr><tr><td style="padding: 2px 5px;"><i>y</i></td><td style="padding: 2px 5px;">3</td><td style="padding: 2px 5px;">9</td><td style="padding: 2px 5px;">27</td><td style="padding: 2px 5px;">81</td></tr></table>	<i>x</i>	1	2	3	4	<i>y</i>	3	9	27	81
<i>x</i>	1	2	3	4							
<i>y</i>	3	9	27	81							

2.	<table border="1" style="border-collapse: collapse; text-align: center;"><tr><td style="padding: 2px 5px;"><i>x</i></td><td style="padding: 2px 5px;">1</td><td style="padding: 2px 5px;">2</td><td style="padding: 2px 5px;">3</td><td style="padding: 2px 5px;">4</td></tr><tr><td style="padding: 2px 5px;"><i>y</i></td><td style="padding: 2px 5px;">3</td><td style="padding: 2px 5px;">9</td><td style="padding: 2px 5px;">15</td><td style="padding: 2px 5px;">21</td></tr></table>	<i>x</i>	1	2	3	4	<i>y</i>	3	9	15	21
<i>x</i>	1	2	3	4							
<i>y</i>	3	9	15	21							

3.  $y = 5 \cdot 2^x$

4.  $y = 6 \cdot x^3$

5.  $y = 3x - 8$

6.  $y = 4 \cdot 0.3^x$

**Evaluate each function for the given value.**

7.  $f(x) = 5^x$  for  $x = 4$

8.  $h(t) = 3 \cdot 4^t$  for  $t = -3$

9.  $y = 8 \cdot 0.7^x$  for  $x = 3$

**Graph each exponential function.**

10.  $f(x) = 3^x$

11.  $y = 0.25^x$

12.  $y = 8 \cdot 1.2^x$

13. What is the solution or solutions of  $3^x = 5x$ ?

14. An investment of \$8000 in a certain Certificate of Deposit (CD) doubles in value every seven years. The function that models the growth of this investment is  $f(x) = 8000 \cdot 2^x$ , where  $x$  is the number of doubling periods. If the investor does not withdraw any money from this CD, how much money will be available for withdrawal after 28 years?

15. A population of amoebas in a petri dish will triple in size every 20 minutes. At the start of an experiment the population is 800. The function  $y = 800 \cdot 3^x$ , where  $x$  is the number of 20 minute periods, models the population growth. How many amoebas are in the petri dish after 3 hours?

16. A new car costs \$15,000 to build in 2010. The company's financial analysts expect costs to rise by 6% per year for the 10 years they are planning to build the car. The cost to build the car can be modeled by the function  $f(t) = 15,000 (1.06)^t$ , where  $t$  is the number of years after 2010. How much will it cost the company to build the car in 2017?

**Practice** (continued)

Form G

## Exponential Functions

Evaluate each function over the domain  $\{-2, -1, 0, 1, 2, 3\}$ . As the values of the domain increase, do the values of the range *increase* or *decrease*?

17.  $f(x) = 3^x$

18.  $y = 4 \cdot 2^x$

19.  $m(x) = 0.3^x$

20.  $g(t) = 4 \cdot 3^x$

21.  $y = 50 \cdot 0.1^x$

22.  $f(x) = 2 \cdot 4^x$

Which function has the greater value for the given value of  $x$ ?

23.  $y = 5^x$  or  $y = x^5$  for  $x = 2$

24.  $y = 300 \cdot x^3$  or  $y = 100 \cdot 3^x$  for  $x = 4$

Solve each equation.

25.  $3^x = 81$

26.  $5 \cdot 2^x = 40$

27.  $4^x + 4 = 68$

28.  $3 \cdot 2^x - 16 = 80$

29. **Reasoning** The function that models the growth of a \$1000 investment that earns 7% per year is  $f(x) = 1000(1.07)^x$ . How do you think you would write a function that models the growth of \$1500 that earns 8% per year? Use that function to determine how much money a person would have after 5 years if she invested \$1500 in an account earning 8% per year.

30. **Writing** Discuss the differences between exponential functions with a base of 2 and 3,  $y = 2^x$  and  $y = 3^x$ , and quadratic and cubic functions  $y = x^2$  and  $y = x^3$ . Focus on the shapes of the different graphs and rates of growth.

31. **Open-Ended** Find the value of each of the functions a)  $f(x) = 2x^2$  and b)  $f(x) = 2 \cdot 2^x$  for  $x = 5$ . Write another quadratic function and another exponential function with a base of two whose values at  $x = 5$  are between the values you found for functions a and b.
